LEGAL INTELLIGENCE PLATFORM

BUSINESS REQUIREMENTS DOCUMENT (BRD)

Version 2.1 | 17 October 2026 | Otic Group

Classification: Confidential • Status: Draft for stakeholder validation

Target markets: Law firms and corporate legal departments through one modular enterprise platform.

Document control

Field	Value
Product owner	Otic Group (proposed)
Business sponsor	To be appointed
Document status	Baseline proposal, subject to validation
Geographic launch	Uganda-first, configurable for other jurisdictions
Audience	Product, engineering, legal SMEs, security, operations, sales and implementation

1. Executive summary

LIP is a multi-tenant, modular legal operations and intelligence platform for law firms and in-house legal departments. It combines governed legal research, contract lifecycle intelligence, matter management, drafting, litigation support, compliance tracking and executive reporting.

LIP is designed to augment qualified professionals, not to replace lawyers, courts, regulators or institutional approval authorities. Every material legal output must retain its source provenance, review status and accountable human approver.

The product supports separate law-firm and corporate configurations using shared platform services, strict tenant segregation and role-based access controls. The MVP prioritises workflows that can be delivered and measured with reliable source material.

2. Business problem and opportunity

Legal work is fragmented across email, shared drives, spreadsheets, research websites and document repositories. This produces duplicated effort, inconsistent templates, poor deadline visibility, slow contract reviews and limited management intelligence.

Law firms need efficient intake, research, drafting, matter collaboration, time capture and client reporting. Corporate legal teams need contract oversight, legal request intake, obligations, litigation visibility, regulatory tracking and defensible governance.

Opportunity hypothesis: a secure, auditable platform with jurisdiction-aware legal knowledge and embedded workflows can reduce administrative effort, accelerate turnaround and improve consistency while preserving professional oversight. These benefits must be tested during pilots.

3. Objectives, outcomes and success measures

O1: Reduce median turnaround time for approved legal research and first-draft preparation. O2: Improve visibility of matters, contracts, deadlines and obligations. O3: Increase consistency of approved legal templates and review practices. O4: Strengthen legal data governance and traceability. O5: Establish a commercially repeatable, modular enterprise SaaS product.

Proposed pilot KPIs (targets to be agreed after baseline): research turnaround; contract review turnaround; percentage of AI claims with verified citations; matter deadline compliance; document rework rate; monthly active legal users; cost per processed matter; user satisfaction; and zero critical cross-tenant data incidents.

4. Scope and release boundaries

MVP (R1): identity/tenant administration; legal request intake; matter workspace; controlled document repository; citation-grounded legal research over approved corpora; document summarisation and first-draft assistance; basic contract review; task/deadline tracking; review/approval; audit logging; dashboards; usage metering and billing-ready exports.

R2: expanded contract lifecycle, clause libraries, obligation extraction, litigation timelines, client portal, richer integrations, advanced compliance registers and legal spend analytics.

R3: cross-jurisdiction packs, sophisticated precedent analytics, configurable multi-agent workflows, e-filing or court integrations where authorised and technically available, and predictive decision-support models only after independent validation.

Out of scope for MVP: autonomous legal representation, automatic court filings, unreviewed legal opinions, guarantees of case outcomes, unsupervised legal advice to consumers, and uncontrolled ingestion of privileged or copyrighted third-party content.

5. Users and permissions

Platform Super Administrator: service health, tenant provisioning and platform configuration, without default access to tenant legal content. Tenant Administrator: users, policies, integrations, usage and permissions.

Law Firm Managing Partner / Practice Head: matter oversight, workload, client reporting and approvals. Advocate / Associate: research, drafting, matters, assigned documents and review. Paralegal / Legal Assistant: intake, records, research support and task administration under supervision.

Corporate General Counsel / Head of Legal: legal risk, matters, policy, spend, reporting and approvals. In-house Counsel: requests, contract reviews, regulatory issues and disputes. Business Requestor: submits requests and sees only authorised status and outputs. Compliance / Risk Officer: obligations and compliance reports subject to permissions.

External Client / Counterparty: limited portal access only where enabled. Finance / Procurement: approved cost, vendor and contract metadata. Auditor: time-bound, read-only access to permitted logs and records.

Permission design: deny by default; tenant isolation; matter-level access lists; ethical walls; restricted privilege groups; configurable maker-checker approvals; MFA for privileged roles; emergency access only with logging and post-event review.

6. Operating model and workflow catalogue

WF-01 Legal request: requestor submits category, facts, urgency and attachments → conflicts/access checks → triage → matter assignment → work and review → approved response → closure and feedback.

WF-02 Legal research: authorised user states question and jurisdiction → source retrieval → AI synthesis with pinpoint citations and dates → validation flags → lawyer verification → saved research note.

WF-03 Contract review: document upload → OCR/parsing if needed → clause classification and comparison to approved playbook → risks and redlines → counsel review → negotiation/version control → approval and repository filing.

WF-04 Legal drafting: select authorised template and matter → supply facts → draft with source/template attribution → internal review → controlled export → signed or issued document recorded.

WF-05 Litigation support: create dispute matter → log parties, court, case reference and events → upload pleadings/evidence → timeline and issue map → deadline review → lawyer-approved submissions and reporting.

WF-06 Regulatory change: capture verified regulatory update → classify relevance → map impacted obligations → assign action owner → review and evidence → close with audit history.

WF-07 Client collaboration: client request → scoped upload → assigned lawyer response → approved status update → access expiry and archiving.

WF-08 Management reporting: permission-filtered portfolio metrics → drilldown to source records → approved dashboard/export → audit record.

7. Functional requirements catalogue

Priority legend: M = MVP must-have; S = subsequent release; C = conditional or integration-dependent. Acceptance tests are minimum demonstrations and are not substitutes for security and legal validation.

Identity, tenants and administration

ID	Release	Requirement	Minimum acceptance criterion
TEN-001	M	Provision independent tenants with configurable organisation profile	Tenant A cannot retrieve Tenant B records through UI or API
TEN-002	M	Support MFA, SSO-ready identity and configurable role permissions	Unauthorised actions are rejected and logged
TEN-003	M	Enforce matter-level access and ethical walls	Restricted matter excluded from search and AI context
TEN-004	M	Maintain user provisioning, deactivation and session revocation	Disabled account cannot access tenant content
TEN-005	S	Offer enterprise identity federation and SCIM provisioning	Provisioning changes propagate with audit record

Intake and matter management

ID	Release	Requirement	Minimum acceptance criterion

MAT-001	M	Create requests with structured intake fields and attachments	Request receives unique reference and status
MAT-002	M	Convert requests into matters with owner, category and priority	Matter linked to original request and assigned owner
MAT-003	M	Assign tasks, reminders and deadlines with time-zone support	Deadline appears in assigned users task queue
MAT-004	M	Maintain activity, notes and matter timeline	Chronological history shows actor and timestamp
MAT-005	S	Support conflicts screening for law firms with controlled party matching	Potential conflicts flagged for human clearance
MAT-006	S	Track external counsel, fees, budgets and matter cost	Approved costs aggregate by matter

Legal research and knowledge

ID	Release	Requirement	Minimum acceptance criterion
RES-001	M	Search approved legal sources by jurisdiction, date and document type	Results show source identity and publication/effective date
RES-002	M	Produce grounded research summaries with citations to source passages	Every material legal proposition links to accessible source
RES-003	M	Disclose missing, conflicting or outdated authority	System flags uncertainty rather than fabricating authority
RES-004	M	Keep jurisdiction and corpus version visible on each output	Research note includes jurisdiction and source timestamp
RES-005	S	Support saved research folders and shared approved knowledge notes	Access-limited notes can be retrieved by authorised team
RES-006	S	Offer comparative jurisdiction research with separate source sets	Jurisdiction-specific findings are clearly separated

Document intelligence and drafting

ID	Release	Requirement	Minimum acceptance criterion

DOC-001	M	Upload, classify and version approved file formats	Versions retained with uploader and time
DOC-002	M	Summarise long documents with page or clause references	Reviewer can navigate to cited excerpt
DOC-003	M	Draft using approved templates and controlled prompts	Draft marked AI-assisted and pending approval
DOC-004	M	Compare versions and highlight material changes	Change report links to document versions
DOC-005	S	Maintain approved clause and precedent library	Only authorised published clauses used by default
DOC-006	S	Generate structured legal memoranda and pleadings for lawyer review	Output includes template metadata and approval status

Contract intelligence

ID	Release	Requirement	Minimum acceptance criterion
CON-001	M	Extract parties, dates, governing law, key clauses and obligations	Reviewer sees editable extracted fields with source links
CON-002	M	Identify deviations from organisation-approved contract playbook	Each deviation shows rule, location and severity
CON-003	M	Support legal risk annotations and reviewer disposition	Risks can be accepted, mitigated or escalated with reason
CON-004	S	Support approval routing and execution-ready version tracking	No final state without required approvals
CON-005	S	Track renewals, expiries and obligation owners	Alerts generated from validated dates
CON-006	S	Offer portfolio-level contract exposure analytics	Metrics drill down to permitted contracts

Litigation and disputes

ID	Release	Requirement	Minimum acceptance criterion

LIT-001	S	Capture case metadata, parties, counsel and forum	Case record validated and uniquely identifiable
LIT-002	S	Create evidence register with provenance and custody notes	Every evidence item has history and access controls
LIT-003	S	Generate issue maps and chronology from reviewed records	Each event links to evidence source
LIT-004	S	Track hearing dates and filing deadlines entered or verified by counsel	Alerts require owner acknowledgement
LIT-005	C	Connect to official court systems where lawful and supported	Integration approved and tested against official API

Compliance and regulatory intelligence

ID	Release	Requirement	Minimum acceptance criterion
CMP-001	S	Maintain obligation register by legal entity and jurisdiction	Obligation links to authoritative source
CMP-002	S	Assign control owners, evidence and review dates	Overdue items surface in authorised dashboard
CMP-003	S	Track verified regulatory change notices	Change record contains provenance and effective date
CMP-004	S	Create impact assessment and remediation workflow	Action and sign-off history retained

AI command centre and orchestration

ID	Release	Requirement	Minimum acceptance criterion
AIC-001	M	Offer natural-language queries across user-authorised records	Responses cannot expose inaccessible documents
AIC-002	M	Show supporting citations, confidence caveats and review status	Unsupported assertions are flagged or withheld
AIC-003	M	Require explicit human approval for external legal deliverables	Unapproved output cannot be published as final

AIC-004	M	Log model version, tool calls and prompt/output metadata safely	Audit record supports authorised investigation
AIC-005	S	Route specialised research, contract and matter agents	Workflow execution trace shows handoffs
AIC-006	S	Allow tenant-approved AI models and deployment policies	Policy blocks unapproved model or data transfer

Dashboards and reporting

ID	Release	Requirement	Minimum acceptance criterion
DAS-001	M	Show matter pipeline, workload, SLA and deadlines	Metrics reconcile to underlying matter records
DAS-002	M	Display research and contract throughput with usage trends	Filters obey tenant and role permissions
DAS-003	S	Show litigation exposure, legal spend and obligation risk	Dashboard source definitions documented
DAS-004	M	Export approved reports with access control and timestamp	Exports are traceable and permission-filtered

Client portal and collaboration

ID	Release	Requirement	Minimum acceptance criterion
POR-001	S	Allow restricted external intake and document exchange	External users see only invited matters
POR-002	S	Provide client-visible status milestones	Only approved statuses exposed
POR-003	S	Enable secure notifications without privileged content leakage	Notification content complies with configured policy

Billing, integrations and operations

ID	Release	Requirement	Minimum acceptance criterion

BIL-001	M	Meter usage by tenant, module, user and AI consumption unit	Meter totals reconcile to event ledger
BIL-002	M	Export billing-ready usage and licence data	Billing export matches plan entitlements
BIL-003	S	Support subscription plans, quotas, overages and credit wallets	Plan rules applied and auditable
INT-001	M	Provide documented APIs and secure import/export	API auth, validation and audit tests pass
INT-002	S	Connect approved Microsoft 365 repositories and workflows	Consent and permission boundaries preserved
INT-003	S	Support optional DMS, e-signature and finance integrations	Failure handling and data mapping tested
OPS-001	M	Provide monitoring, incident logging and tenant-level configuration	Support can investigate without default content access

8. Non-functional requirements and service levels

NFR-001 Security: encryption in transit and at rest; managed secrets; least privilege; segregation of duties; penetration testing before production. NFR-002 Privacy: documented lawful basis, data minimisation, purpose limitation, retention and deletion controls. NFR-003 Availability: initial proposed production target 99.5% monthly, subject to architecture and commercial SLA.

NFR-004 Performance: proposed p95 interactive navigation under 3 seconds and standard AI query response under 30 seconds for agreed workload, excluding large-batch jobs; verify through load testing. NFR-005 Scale: tenant-aware horizontal scaling and quotas. NFR-006 Resilience: backups, restore testing, documented RPO/RTO to be agreed per deployment tier.

NFR-007 Accessibility: target WCAG 2.2 AA for core web journeys where practicable. NFR-008 Interoperability: documented REST APIs and common office formats. NFR-009 Observability: telemetry, alerting and incident runbooks. NFR-010 Portability: documented export and offboarding. NFR-011 Quality: reproducible test suite and model evaluation dataset. NFR-012 Localisation: English MVP, extensible to additional languages.

9. Data model and information governance

Core entities: Tenant, User, Role, Team, Client, Counterparty, LegalRequest, Matter, MatterParty, Document, DocumentVersion, ResearchSource, Citation, ResearchNote, Contract, Clause, Obligation, Risk, Task, Deadline, Approval, LitigationEvent, EvidenceItem, RegulatoryChange, UsageEvent, Subscription, AuditEvent.

Data classification: public authority; internal; confidential; privileged/restricted; special-category or highly sensitive where applicable. Default no cross-tenant training or retrieval. Customer data must not be used for foundation-model training without explicit contractual permission and lawful basis.

Each AI output must record source references, relevant corpus/version, generation timestamp, human review state and retention policy. Privilege and legal professional confidentiality require client-specific legal review and contractual controls.

Jurisdiction packs must define source provenance, coverage, update cadence, licence permissions, effective dates and citation formats. Uganda legal sources should be licensed or accessed through permitted official channels; completeness cannot be assumed.

10. Security, responsible AI and legal governance

Governance board: Product Owner, Legal Domain Lead, Engineering Lead, Information Security, Data Protection, Operations and Commercial Lead. Define approval gates for source onboarding, model deployment, integrations and external release.

AI controls: retrieval-grounded generation; prompt-injection defence; source and output validation; model red-team tests; refusal/abstention when evidence is inadequate; human sign-off; high-risk use-case restrictions; monitoring for hallucinations, bias and confidentiality leakage.

Uganda regulatory review should include the Data Protection and Privacy Act, 2019 and implementing requirements, professional obligations, intellectual-property and database licensing, cybersecurity duties, sector-specific rules and cross-border transfer restrictions where relevant. Obtain counsel verification of the current legal position before go-live.

Audit: immutable or tamper-evident event trails, retention schedules, access review, incident escalation, breach-response workflow and periodic independent assurance.

11. Commercial model

Proposed structure (commercial hypotheses, not approved prices): one-time onboarding/configuration where applicable; monthly or annual institution licence; module-based entitlements; named or active-user bands; separately metered AI usage; premium deployment and support tiers; optional data/source subscriptions passed through transparently.

Law Firm packages: Practice Essentials (intake, matters, research, drafting); Practice Professional (contract and collaboration); Practice Enterprise (advanced controls, integrations and analytics). Corporate packages: Legal Operations Core; Legal Intelligence Professional; Enterprise Legal Command Centre.

Commercial safeguards: minimum monthly platform fee; included AI credits with published unit definition; prepaid or invoiced overage; spend caps and alerts; transparent third-party source costs; implementation statements of work; no promise of free unlimited AI consumption.

Pricing, target margins and discount authority require a cost model covering model tokens, retrieval, storage, source licensing, support, cloud hosting, implementation and channel commissions. Proposed metrics: gross margin, annual recurring revenue, activation, net retention, cost per tenant and usage expansion.

12. MVP backlog and delivery plan

Phase 0 — discovery and validation: 2–4 design partners (law firms and corporate legal teams), process mapping, Uganda source rights, security threat model, prioritised user stories and baseline KPIs.

Phase 1 — foundation: tenant identity, permission model, matter intake, document repository, audit and usage ledger. Phase 2 — intelligence: source ingestion, grounded research, drafting and contract review with human

approval. Phase 3 — pilot: dashboards, operational hardening, model evaluations, training and controlled customer rollout.

Release gates: signed requirements; approved legal source inventory; security and privacy review; tested cross-tenant isolation; acceptance testing with legal SMEs; recovery testing; production runbooks; commercial terms and support ownership. Timelines and staffing are to be estimated after discovery, not assumed.

13. End-to-end UAT scenarios

UAT-01: Law firm opens a client matter, restricts access to named counsel, researches a question and saves a citation-backed memo; an excluded user sees no matter content.

UAT-02: Corporate requestor submits a contract; legal counsel reviews AI-extracted obligations and deviations, records decisions, routes approval and exports an approved version.

UAT-03: Research references an outdated or unavailable authority; system flags it and refuses to invent a citation; reviewer can inspect sources.

UAT-04: Tenant administrator deactivates a user; access is revoked, historical contributions remain auditable and data ownership stays with tenant.

UAT-05: Usage events, AI consumption and licence entitlements reconcile with the monthly billing export.

UAT-06: A malicious instruction embedded in a document fails to override system policy or expose another matter or tenant.

UAT-07: A confidential matter is excluded from management dashboard detail for an unauthorised viewer, while authorised aggregate reporting follows policy.

14. Risks, dependencies and mitigations

R1 Legal-source availability/licensing → verified rights, source registry and permitted ingestion. R2 Hallucinated or stale law → source grounding, dates, validation and counsel review. R3 Privilege leakage → strict matter permissions, isolation and external-sharing approval. R4 Model cost volatility → metering, routing, quotas and caps.

R5 Unclear user workflows → co-design with launch partners. R6 Integration dependency → API-first modularity and manual fallback. R7 Poor document extraction → quality thresholds and reviewer correction. R8 Regulatory uncertainty → jurisdiction-specific counsel sign-off. R9 Vendor concentration → portability, model abstraction and exit plan.

15. Decision register and open questions

DEC-01 Confirm pilot law firms and corporate legal departments. DEC-02 Confirm official/licensed Uganda case-law and legislation sources and update responsibilities. DEC-03 Select hosting, residency and deployment choices. DEC-04 Agree precise MVP boundaries and user seats.

DEC-05 Approve legal review workflow and privileged-data policy. DEC-06 Agree commercial packages and cost model. DEC-07 Select initial integrations (Microsoft 365, document management and e-signature). DEC-08 Establish measurable pilot success thresholds and sign-off authority.

16. Traceability and sign-off

Each requirement ID shall map to a product backlog item, design specification, test case, owner, release, verification result and change history. Any change to MVP scope requires documented impact assessment and Product Owner approval.

Proposed sign-off roles: Executive Sponsor; Product Owner; Legal Domain Lead; Engineering Lead; Information Security / Data Protection Lead; Pilot Customer Representative. Names and dates remain blank until authorised approval.

Approval role	Name / signature	Date
Executive Sponsor	_____	_____
Product Owner	_____	_____
Legal Domain Lead	_____	_____
Engineering Lead	_____	_____
Security / Privacy Lead	_____	_____

END OF DOCUMENT

17. Omnichannel user interaction and experience

Purpose: Deliver one coherent Legal Intelligence Platform (LIP) across WhatsApp, web, mobile and approved enterprise channels, with role-aware journeys, consent, identity verification and auditable hand-offs. A channel is not a separate legal record system: all approved interactions are linked to the relevant tenant, person and matter.

17.1 Channel strategy

Channel	Target audience	Permitted use and controls	Release
WhatsApp Business	Clients, prospects, authorised staff	Enquiries, guided intake, appointment requests, status notifications, controlled document upload, secure portal deep-links; verify identity and consent before disclosing matter details	MVP
Web client portal	Clients and external counsel	Intake, secure uploads, matter status, approvals, messages, bills where enabled	MVP
Web professional workspace	Advocates, partners, in-house counsel, paralegals	Legal research, AI Command Centre, matter work, drafting, reviews, case records and dashboard	MVP

Mobile responsive web	All authorised users	Secure access to essential web tasks and notifications	MVP
Native mobile apps	Clients and professionals	Biometric sign-in, push alerts, secure tasks and document access	Later
Microsoft Teams	Enterprise legal teams	Approved internal alerts, tasks, and governed knowledge queries	Phase 2
API / embedded channels	Enterprise systems	Approved event ingestion, retrieval and workflow actions with scoped access	Phase 2

17.2 Omnichannel functional requirements

ID	Requirement	Detailed behaviour	Release	Acceptance criteria
LIP-OM-001	Unified channel identity	Link channel profiles to a verified user within a tenant; prevent accidental cross-client or cross-tenant linkage.	MVP	Given two unverified WhatsApp numbers, no private matter data is revealed or merged.
LIP-OM-002	WhatsApp guided intake	Capture enquiry category, jurisdiction, contact details, conflict-check inputs, consent and documents; create a tracked intake.	MVP	An authorised intake appears in the firm queue with timestamp and source channel.
LIP-OM-003	Channel continuity	Preserve approved conversation context and matter reference when a user switches WhatsApp to secure web portal.	MVP	Verified user can resume the same intake without re-entering approved data.
LIP-OM-004	Secure document handling	Scan, classify, encrypt and access-control uploaded documents; provide secure links for sensitive outputs.	MVP	Unauthorised users cannot retrieve documents from channel links or expired URLs.
LIP-OM-005	Escalation to human counsel	Route high-risk, ambiguous, urgent or advice-seeking requests to designated staff with queue and audit trail.	MVP	AI does not present unapproved legal advice as final; escalation owner and status are visible.

LIP-OM-006	Consent and disclosures	Record privacy notice, processing purpose, channel opt-in, AI-use notice and retention terms as applicable.	MVP	Consent version, time, purpose and withdrawal status are retrievable.
LIP-OM-007	Outbound notifications	Send approved status, deadline, appointment and document-ready alerts with opt-out and minimal disclosure.	MVP	Messages are sent only to verified opted-in recipients and delivery is logged.
LIP-OM-008	Channel access policy	Configure allowed data and actions per channel, role, matter sensitivity and jurisdiction.	MVP	Privileged documents and confidential case facts are blocked on unapproved channels.
LIP-OM-009	Teams workspace	Enable tenant-scoped Teams alerts and controlled legal knowledge interactions.	Phase 2	Teams user cannot access records beyond mapped LIP permissions.
LIP-OM-010	Integration APIs	Provide authenticated, versioned APIs and webhook events with throttling, consent and tenant scope.	Phase 2	Cross-tenant requests are rejected and all write events are auditable.

17.3 End-to-end WhatsApp journeys

Client legal enquiry and onboarding

User starts WhatsApp chat → receives privacy and AI disclosure → selects issue type and jurisdiction → submits minimum intake details → identity verification and consent → conflict-check review → matter opened or referral declined → secure portal link and assigned staff notification.

Contract review request

Client requests contract review → submits document using approved channel → malware scanning and classification → secure matter assignment → AI extracts clauses and flags issues → advocate reviews sources and findings → approved output shared via authenticated portal → client receives a minimal WhatsApp alert.

Matter status enquiry

Client requests case status → identity and authorisation verified → LIP retrieves approved client-visible status → sends limited response or secure portal link → logs disclosure; sensitive details are never sent without appropriate safeguards.

Corporate legal intake

Employee initiates legal request on web/Teams/approved WhatsApp → organisation and identity verified → request categorised and assigned → counsel triages and works matter → approvals and audit trail recorded → dashboard updates.

18. Legal Intelligence Dashboard and role-based workspaces

The LIP dashboard is an operational decision-support system, not a substitute for legal judgement. Metrics must be traceable to underlying matters, contracts, activity logs and authorised data sources. Users see only records they are permitted to access.

18.1 Dashboard requirements

ID	Capability	Functional scope	Release	Acceptance criteria
LIP-DI-001	Executive overview	Active matters, workload, priority risks, deadlines, contract obligations and trends	MVP	Every KPI supports drill-down to permissioned source records.
LIP-DI-002	Law firm partner dashboard	Matter pipeline, client portfolio, utilisation, work in progress, billing and profitability where data exists	Phase 2	Financial figures reconcile to configured billing data and definitions.
LIP-DI-003	General counsel dashboard	Litigation exposure, contract risk, regulatory obligations, external counsel spend and business-unit workload	MVP	Sensitive exposure estimates show source, date and assumptions.
LIP-DI-004	Advocate workspace	Assigned matters, hearings, tasks, drafts, review requests and upcoming deadlines	MVP	Tasks and dates match source matter records.
LIP-DI-005	Compliance dashboard	Obligation register, overdue controls, regulatory changes and remediation ownership	Phase 2	Every alert identifies evidence, accountable owner and status.
LIP-DI-006	Contract intelligence dashboard	Expiry/renewal windows, obligations, deviations, approvals and risk distribution	MVP	Contract dates and risks can be traced to source clauses.
LIP-DI-007	Litigation dashboard	Matter stage, deadlines, counsel assignments, claims, exposure and document completeness	MVP	No AI-generated outcome probability is displayed as a fact.

LIP-DI-008	AI Command Centre analytics	Natural-language queries across permitted records with filters, source citations and uncertainty	MVP	Queries return cited results or an explicit no-evidence response.
LIP-DI-009	Administration and consumption	Seat count, AI credits, model consumption, activity, channel costs and service health	MVP	Consumption records reconcile to billable events and user access.
LIP-DI-010	Custom filters and exports	Filter by date, office, practice area, business unit, matter owner and risk tier; export permitted reports	MVP	Exports inherit access restrictions and are logged.
LIP-DI-011	Alerts and escalation	Configurable thresholds for deadlines, unreviewed outputs, SLA breaches and risk escalation	MVP	Alerts create tracked actionable items and avoid duplicate flooding.
LIP-DI-012	Cross-matter analytics	Portfolio patterns and trends without leaking privileged or segregated client information	Phase 2	Analytics enforce ethical walls and tenant boundaries.

18.2 Role-specific landing experiences

Role	Default landing page	Core actions
Managing partner	Firm performance and practice portfolio	Allocate resources, inspect matter status, review financial metrics, manage escalations
Advocate / associate	My matters and AI legal workspace	Research, draft, compare, review, log time and manage deadlines
General counsel / head of legal	Enterprise legal risk and department performance	Monitor litigation, contracts, compliance, costs and approvals
Business requester / client	My requests and authorised matter updates	Submit enquiries, upload documents, track status, approve requests
Compliance officer	Regulatory obligation and remediation centre	Review alerts, assign controls and collect evidence
Tenant administrator	Users, permissions, integrations and consumption	Manage roles, channel policies, licences and audit exports

19. Revised MVP, commercials, governance and sign-off

19.1 MVP release boundary

MVP includes responsive professional web portal, secure client portal, WhatsApp Business guided intake and minimal notifications, verified identity and consent, tenant/role-based controls, matter management, document ingestion, grounded legal research and drafting with human approval, contract review, core litigation tracking, AI Command Centre, baseline intelligence dashboards, AI consumption metering, and audit logs. Native apps, Teams conversational actions, external integrations beyond essentials, advanced billing/profitability, predictive analytics and cross-matter trend analysis are later releases.

19.2 Commercial model

Proposed pricing structure for validation: (a) tenant subscription by firm or corporate legal department, (b) tiered user licences or included seats, (c) AI consumption credits and fair-use policy, (d) optional premium modules, (e) optional implementation, customisation, data migration and dedicated hosting, and (f) channel pass-through costs such as WhatsApp messaging. No prices or margins are approved in this draft. Customers retain ownership/control of their data under agreed contracts; confidentiality and data isolation are non-negotiable.

19.3 Security and legal governance gates

Before pilot: complete jurisdiction-specific legal review; privacy and data protection assessment under applicable Ugandan law; client confidentiality and privilege handling rules; conflict-check and ethical-wall design; source licensing and case-law citation verification; WhatsApp Business policy and messaging consent review; retention/deletion rules; encryption, RBAC, MFA for professional accounts, logging and incident response; AI output review controls; penetration testing; and a documented human escalation policy. Do not train shared models on customer matter data without explicit contractual permission.

19.4 UAT and release acceptance scenarios

Test ID	Scenario	Pass condition
LIP-UAT-OM-01	Prospect opens WhatsApp intake and submits legal enquiry	Verified consent, tracked intake, assigned queue, no premature legal advice
LIP-UAT-OM-02	User transitions from WhatsApp to web	Same approved matter context shown after authentication
LIP-UAT-OM-03	Unauthorised user requests confidential matter status	No disclosure; failed access logged
LIP-UAT-OM-04	Document submitted for contract review	Secure storage, source-linked AI flags and mandatory counsel approval
LIP-UAT-DI-01	General counsel views dashboard	Only authorised data; KPI drill-down and definitions available
LIP-UAT-DI-02	Managing partner accesses another client's restricted matter	Ethical wall blocks record and aggregation leakage
LIP-UAT-DI-03	AI Command Centre asked unsupported legal question	Explicit uncertainty, no fabricated statute or citation

LIP-UAT-DI-04	AI usage charged to tenant	Metered event matches dashboard and invoice-ready ledger

19.5 Open decisions for product owner approval

Confirm pilot law firm and corporate legal department; initial jurisdiction and authorised legal research sources; preferred WhatsApp provider; hosting and data residency; identity verification method; payment/billing integrations; commercial tiers; service levels; whether corporate employees may use WhatsApp for privileged requests; approved pilot success metrics and acceptance signatories.

Document status: Draft for stakeholder validation. No requirement or release target is deemed contractually committed until formally approved.

20. Master product architecture and scope consolidation

Version 2.0 consolidates and supersedes overlapping v1.1 requirements. Existing requirement IDs remain valid. The additional IDs below extend, rather than replace, the baseline. In any conflict, the stricter confidentiality and human-review requirement prevails. All functionality remains subject to pilot validation and product-owner sign-off.

Layer	Business capability	Primary users
Engagement	WhatsApp, web, mobile roadmap, Teams roadmap, API, unified inbox	Clients, stakeholders, intake teams
Legal AI	Research, contracts, drafting, litigation, compliance, command centre	Advocates, legal officers
Legal operations	Matter lifecycle, conflict screening, tasks, evidence, approvals	Practitioners, practice managers
Decision intelligence	Acquisition, conversion, risk, quality, spend, performance	Partners, general counsel, executives
Trust and knowledge	Sources, ethical walls, retention, audit, evaluation	Compliance, security, legal reviewers
Otic administration	Tenant provisioning, licences, AI usage, billing, infrastructure	Otic authorised administrators

21. Channel acquisition, conversion and commercial intelligence

Business requirement: LIP shall capture and attribute enquiries and legal service requests across approved channels; maintain a unified, permission-controlled interaction and client record; measure progression through qualification, consultation, engagement and matter creation; and present institution-specific acquisition, service and commercial intelligence. Corporate legal departments shall see service-demand and SLA measures rather than an inapplicable sales funnel.

ID	Requirement	Priority / acceptance evidence

LIP-DI-013	Capture channel, source campaign where available, timestamp and unique enquiry ID	MVP; sample WhatsApp/web requests reconcile to intake ledger
LIP-DI-014	Show channel volume and unique client/request counts with documented definitions	MVP; aggregates reconcile to source records
LIP-DI-015	Maintain separate lead, client, conversation and matter identifiers	MVP; one client can have multiple enquiries
LIP-DI-016	Track configurable funnel stages and stage timestamps	MVP; stage progression and conversion rates reproducible
LIP-DI-017	Link cross-channel journeys only after verified matching and reviewable merge	MVP; false matches remain unmerged
LIP-DI-018	Qualify, prioritise, route and assign requests; permit human override	MVP; override recorded
LIP-DI-019	Display conversion and abandonment by channel and practice area	MVP; filter outputs reconcile
LIP-DI-020	Monitor first response, resolution, escalations and SLA breaches	MVP; SLA clock and exception log validated
LIP-DI-021	Track quoted, contracted, invoiced and collected values separately	Phase 2; finance source and reconciliation confirmed
LIP-DI-022	Compare channel-level demand, conversion and operational efficiency	MVP; consistent cohort definitions
LIP-DI-023	Measure AI-assisted tasks, handoffs, token usage and cost	MVP; usage reconciles with meter
LIP-DI-024	Filter by period, channel, institution, practice, owner and status	MVP; role-scoped filter tests pass
LIP-DI-025	Export and schedule permission-scoped reports	Phase 2; redaction and access tests pass

21.1 Acquisition attribution and KPI definitions

First-touch channel shall be retained as the original acquisition source; latest-touch and assisted channels shall be tracked independently. Deduplication shall not overwrite original records. Enquiry-to-client conversion = unique acquired clients / unique qualified enquiries in the defined cohort; request-to-matter conversion = matters opened / eligible requests. Rates shall disclose denominators, cohort dates and exclusion rules. Cost per acquired client requires verified campaign spend; otherwise the metric is unavailable, not estimated.

22. Omnichannel inbox, client 360 and legal service journeys

ID	Requirement	Release / acceptance
LIP-OM-011	Unified inbox for WhatsApp and web: assign, reply, tag, transfer, escalate and retain authorised history	MVP; handover retains conversation and owner
LIP-OM-012	Client 360 with verified identity, consent, matters, authorised documents and interactions	MVP; permissions prevent unrelated matter visibility
LIP-OM-013	AI-to-human handover with context summary and professional review flag	MVP; operator can accept/reject and audit event persists
LIP-OM-014	Secure document-upload links for sensitive materials; configurable WhatsApp disclosure limits	MVP; expired and unauthorised links denied
LIP-OM-015	Opt-in messaging, template approvals, opt-out and channel outage fallback	MVP; consent and delivery states retained
LIP-OM-016	Consultation scheduling, engagement letter and client acceptance workflows	Phase 2; approvals and signature evidence retained

Representative law firm journey: WhatsApp/web enquiry → consent and identity checks → legal category classification → preliminary conflict screen → lawyer assignment → consultation → approved engagement terms → matter opening → professional workbench → approval → delivery → billing/closure. Corporate journey: employee/stakeholder request → authorisation → category/risk/priority → legal team routing → matter or advisory ticket → review → response → SLA reporting.

23. Legal operations, professional workbench and advanced intelligence

ID	Requirement	Release / acceptance
LIP-COI-001	Screen prospective engagements against permitted clients, counterparties and related parties; hold acceptance pending human clearance	MVP; clearance and exceptions logged
LIP-LSV-001	Ground legal assertions in identifiable sources with jurisdiction, date and verification status; explicitly flag unverified citations	MVP; test corpus includes fabricated citations
LIP-WKB-001	Unified matter-centric research, drafting, document review, task and agent workspace	MVP; work products attached to correct matter

LIP-MLA-001	Configurable intake-to-closure workflows with mandatory legal approval gates	MVP; blocked steps cannot bypass approvals
LIP-DOC-001	Template and clause-based document assembly with versions and reviewer approval	MVP; source/version history preserved
LIP-CDI-001	Deadline and hearing calendar with verified date basis, reminders and escalation	MVP; calculated dates flagged for lawyer confirmation
LIP-EDI-001	Original evidence preservation, versioning, hashes, custody events and access history	MVP foundation; integrity checks reproducible
LIP-PLI-001	Event-driven alerts for obligations, expiries and verified regulatory updates	MVP for known deadlines; regulatory feeds Phase 2
LIP-LSQ-001	Service quality reporting: turnaround, rework, backlog, satisfaction and SLA	MVP core; sample reports validated
LIP-LFI-001	Time, fee, invoice, payment and external-counsel spend intelligence	Phase 2; reconciled finance data
LIP-KNG-001	Matter-authorised knowledge graph linking sources, parties, contracts and decisions	Phase 2; tenant and matter walls enforced
LIP-RCI-001	Map verified regulatory changes to approved policies, contracts and obligations	Phase 2; legal review required before action

24. Role-based intelligence and dashboard acceptance

Workspace	Required views	Access boundary
Managing partner	Acquisition, consultations, conversion, pipeline, profitability, matters, workload, client retention	Firm-wide only as authorised
Advocate/associate	Assigned enquiries, matters, tasks, documents, deadlines, AI workbench	Assigned matters only
General counsel	Business-unit demand, legal risk, contracts, litigation, external counsel spend, SLA	Institution and authorised business units
Executive	Aggregated exposure, priority risk, cost and trends	Aggregate data with drill-down restrictions
Legal operations	Unified inbox, queue, handoffs, staffing, turnaround, quality	Authorised queues

Compliance/security	Obligations, exceptions, AI evaluations, audit and incident logs	Purpose-limited access
Otic administrator	Tenant provisioning, plan, usage, revenue, infrastructure, margin and uptime	No default access to privileged tenant content

The executive command centre shall answer natural-language questions only against authorised structured records and approved sources. Each answer shall identify filters, reporting dates and evidence, and shall not invent missing figures.

25. Security, legal governance and AI assurance

ID	Control / requirement	Verification
LIP-GOV-011	Matter-level ethical walls, least privilege, client confidentiality and tenant isolation	Cross-matter and cross-tenant denial tests
LIP-GOV-012	Human sign-off for legal advice, external filings, privileged opinions and binding decisions	Workflow cannot publish without approval
LIP-GOV-013	Data residency, retention, deletion, export, legal hold and backup policies configurable by tenant	Policy and restore tests
LIP-GOV-014	Model and prompt versioning, grounded output logs, red-team tests and legal-domain evaluation sets	Release evaluation report
LIP-GOV-015	Source currency and licensed content provenance; no unsupported claim of exhaustive coverage	Source metadata and licensing review
LIP-GOV-016	Explicit consent and controlled communications; no assumption of advocate-client relationship on chatbot contact	Consent and disclaimer workflow
LIP-GOV-017	Incident handling, breach escalation, business continuity and degraded-mode access	Recovery exercise
LIP-GOV-018	No use of confidential tenant content for model training without separate valid authorisation	Contract and configuration inspection

Uganda-first deployment shall be reviewed against applicable data protection, professional conduct, court procedure, evidence and sector-specific requirements by qualified counsel. The BRD does not constitute a determination of legal compliance or permission to provide regulated legal services.

26. Commercial, tenant administration and implementation requirements

ID	Requirement	Acceptance
LIP-COM-001	Tenant packages with configurable modules, seats, branding and monthly/annual licences	Plan changes enforce entitlements
LIP-COM-002	AI usage meter by tenant, agent, channel and billing period; configurable limits and alerts	Meter-to-bill reconciliation
LIP-COM-003	Separate institution usage dashboard and Otic commercial dashboard	Tenant cannot view other tenants
LIP-COM-004	Track infrastructure cost, model cost, gross margin and service health by tenant	Cost allocation methodology documented
LIP-IMP-001	Repeatable onboarding: tenant setup, users, roles, channels, knowledge, training and acceptance	Pilot onboarding checklist signed
LIP-RES-001	Backup, restore, outage handling, fallback channels and data export	Recovery and export tests
LIP-INT-001	Controlled integration framework for WhatsApp Business Platform, Microsoft 365, identity, legal sources and finance	Integration permissions and error logs tested

Commercial pricing, target gross margins, hosting selection and source licensing are product-owner decisions to be validated before contracting. Usage-based charges shall distinguish model usage, platform fees and third-party messaging charges where applicable.

27. MVP release gates, UAT and decision register

Gate	Minimum evidence required
MVP channel experience	WhatsApp and web intake, unified inbox, consent, verified identity, escalation and secure upload demonstrated
MVP legal work	Matter creation, conflict screen, research citations, document drafting/review and human approval demonstrated
MVP intelligence	Channel acquisition, conversion, legal operations, risk and AI usage reports reconcile to test data
MVP governance	Tenant isolation, ethical walls, permission tests, audit trails and source verification tests passed
MVP commercial readiness	Tenant provisioning, entitlements, consumption meter and billing reconciliation demonstrated

MVP resilience	Backup/restore, incident escalation and critical record access validated

27.1 Unresolved decisions for sign-off

• Pilot law firm and corporate legal department selection and workflow variations

• Authoritative Uganda legal data providers, licensing terms, refresh frequency and coverage gaps

• WhatsApp provider, messaging costs, approved templates and channel retention constraints

• Deployment model, data residency, target service levels, recovery objectives and security assessment

• Final MVP budget, delivery milestones, pricing packages and AI consumption policy

• Detailed acceptance thresholds for legal citation quality, latency, accuracy and escalation rates

27.2 Approval statement

Approval of this BRD authorises detailed functional and technical design for the agreed MVP, not unsupervised legal decision-making or production release. Any scope additions after approval require impact assessment, prioritisation and change control.

28. Foundational operating architecture: four distinct environments

Executive design decision. LIP shall comprise a customer-facing intelligent interaction platform, an internal legal intelligence and management environment, a separately specified AI Legal Command Centre embedded in authorised professional workspaces, and an Otic-only platform administration environment. All four operate on a shared, governed multi-tenant service foundation. The Command Centre is a functional subsystem, not a fourth independent data silo.

Environment	Primary audience	Purpose	Boundary
A. Customer-facing interaction	Prospective clients, existing clients, internal requesters	WhatsApp, web, mobile and approved channels; intake, identity checks, secure document handoff, appointments, approved status updates	No unrestricted access to privileged files or institutional analytics
B. Internal intelligence dashboard	Advocates, legal officers, partners, general counsel, operations and executives	Unified inbox, client 360, matter operations, acquisition, conversion, legal risk, financial and AI intelligence	Matter-level permissions and ethical walls
C. AI Legal Command Centre	Authorised professionals and executives	Natural-language research, analytics, drafting, retrieval and approval-gated workflow initiation	Inherited user permissions; no autonomous legal advice, filing or binding approvals
D. Otic administration	Otic authorised commercial and platform operators	Tenant provisioning, subscriptions, usage metering, billing, service health and aggregated	No routine visibility into tenant legal content

		cost/margin monitoring	

28.1 Architectural requirements

ID	Requirement	Priority	Acceptance evidence
LIP-ARCH-001	Expose customer-facing and internal interfaces as distinct role-scoped experiences.	MVP	Unauthenticated external user cannot access institutional dashboards.
LIP-ARCH-002	Associate every authorised channel interaction with a tenant, interaction record and, where applicable, verified client and matter identifiers.	MVP	Cross-channel trace succeeds without duplicate unique-client counts.
LIP-ARCH-003	Provide a common orchestration layer for AI agents, workflow services and approved knowledge retrieval.	MVP	Same authorised matter context is available to web and Command Centre.
LIP-ARCH-004	Separate Otic billing and platform metadata from confidential legal content.	MVP	Platform administrator cannot retrieve matter documents through admin APIs.
LIP-ARCH-005	Support configurable institution-specific workflows and branding without cross-tenant leakage.	MVP	Tenant isolation and configuration tests pass.

29. Customer-facing intelligent interaction specification

The external experience shall support WhatsApp and web in MVP. Mobile, Teams and additional channels remain extensible connectors subject to approved channel and security readiness. Clients receive AI-assisted intake and administrative support; substantive legal advice and sensitive matter content require professional authorisation and appropriate secure delivery.

ID	Functional requirement	MVP acceptance criterion
LIP-CFX-001	Create an enquiry from WhatsApp or web with source, timestamp, consent state and unique identifier.	Every accepted enquiry appears in the unified inbox and acquisition dashboard.
LIP-CFX-002	Provide configurable practice-area intake questions and document request flows.	Responses and file metadata map to the correct tenant and enquiry.
LIP-CFX-003	Support verified identity linking across WhatsApp and web.	Unverified matches remain separate pending human reconciliation.

LIP-CFX-004	Escalate conversations to an authorised human with context and ownership.	Agent handover preserves interaction history and response SLA.
LIP-CFX-005	Issue secure links for privileged documents and sensitive case updates.	Unauthorised or expired links do not disclose content.
LIP-CFX-006	Capture appointment requests, consultation outcomes and engagement stage.	Stage changes are visible in funnel reporting with event timestamps.
LIP-CFX-007	Allow clients to request permitted matter status updates.	Responses contain only explicitly client-shareable milestones.
LIP-CFX-008	Record channel opt-in, consent withdrawal and retention policy events.	Withdrawal changes subsequent messaging eligibility.

29.1 End-to-end service journey

Enquiry (WhatsApp/web) → consent and intake → identity verification where required → preliminary conflict screening → lead qualification and practice-area routing → human consultation → engagement approval → matter creation → secure document collaboration → authorised updates → resolution and billing → closure and retention. A corporate legal department may substitute internal service-request authorisation for commercial engagement.

30. Internal Legal Intelligence Dashboard: acquisition to resolution

The internal dashboard shall distinguish activity, unique people, qualified demand, new matters, commercial outcomes and service performance. Channel attribution must not be confused with channel of latest contact. The same interaction records shall power operational views and approved management reporting.

ID	Dashboard requirement	Minimum measure / acceptance
LIP-DASH-001	Channel acquisition	WhatsApp and web enquiries by first-touch source, period and practice area; reconcile to intake events.
LIP-DASH-002	Conversion funnel	Enquiry → qualified → consultation → engaged → matter; selectable date cohort and denominator.
LIP-DASH-003	Unified operations inbox	Open, assigned, escalated, overdue and resolved conversations with accountable owner.
LIP-DASH-004	Client 360°	Authorised client identity, verified channels, enquiries, matters and communications.
LIP-DASH-005	Legal operations	Matter status, owner, workload, deadline exposure, cycle time and exceptions.
LIP-DASH-006	Legal risk	High-risk contracts, litigation exposure, compliance actions and

		source confidence.
LIP-DASH-007	Commercial performance	Pipeline, quoted, contracted, invoiced and collected values as distinct metrics.
LIP-DASH-008	AI operations	Agent invocations, handovers, error rates, token/usage consumption and estimated costs.
LIP-DASH-009	Role-based reporting	Partner, advocate, general counsel, compliance, operations and executive views respect permissions.
LIP-DASH-010	Exports and scheduled summaries	Authorised filters and exports reproduce on-screen totals.

30.1 KPI definitions and data rules

KPI	Definition	Control
Unique enquiries	Count of distinct enquiry IDs created in selected reporting period	Do not equate messages with enquiries
Unique acquired clients	Count of verified client IDs whose first approved engagement occurs in period	Deduplicate cross-channel identities
Qualification rate	Qualified enquiries / eligible enquiries in same defined cohort	Publish cohort and exclusion rules
Consultation conversion	Enquiries with booked consultation / eligible enquiries	Count unique enquiry IDs
Engagement conversion	Engaged enquiries / eligible qualified enquiries	Do not count proposed engagements as signed
Matter conversion	Enquiries resulting in at least one created matter / eligible enquiries	Explicit one-to-many mapping
Channel conversion	Converted enquiries originally acquired via channel / eligible enquiries acquired via channel	Preserve immutable first-touch attribution
Pipeline value	Sum of open, qualified opportunities at their current estimated fee value	Separate from recognised revenue
AI cost per enquiry	Attributed AI processing cost / eligible enquiries	Exclude unallocated infrastructure or disclose allocation

31. AI Legal Command Centre: functional specification

The Command Centre shall be a secure natural-language interface accessible from the internal legal dashboard and professional workbench. It shall answer questions, retrieve cited evidence, prepare drafts, construct charts and initiate authorised workflows. Every response must be permission-filtered; every material action must be traceable.

ID	Command Centre requirement	Acceptance criterion
LIP-CMD-001	Query authorised legislation, judgments, policies, contracts, matters and structured operational metrics.	Results include source links, scope and freshness where available.
LIP-CMD-002	Route tasks to research, contract, litigation, compliance, document and analytics agents.	Execution record identifies agent, tools and outcome.
LIP-CMD-003	Generate charts and tabular summaries from approved dashboard metrics.	Numbers reconcile to the same governed KPI definitions.
LIP-CMD-004	Draft opinions, correspondence, agreements and management reports for review.	Output is labelled draft and cannot auto-publish as legal advice.
LIP-CMD-005	Separate informational answers, recommendations and executable actions.	Execution path requires explicit action selection and policy checks.
LIP-CMD-006	Require human approval for external communications, sensitive disclosures, contract approval and filings.	Blocked execution without an authorised approver event.
LIP-CMD-007	Disclose unsupported or unverifiable legal propositions and jurisdictional uncertainty.	Unverified citations are not represented as authoritative.
LIP-CMD-008	Apply ethical walls, tenant boundaries and matter permissions to retrieval and tool calls.	Adversarial access tests yield no restricted content.
LIP-CMD-009	Record prompts, retrieved source references, outputs, approvals and actions under controlled retention.	Audit trace available to authorised reviewers.
LIP-CMD-010	Support safe failure and human handoff on tool errors or uncertain outputs.	Failure does not create irreversible actions.

31.1 Illustrative authorised commands

• Compare WhatsApp and web acquisition, qualification and engagement conversion for the current quarter.

• Show high-risk active litigation matters and their recorded financial exposure, with source matters.

• Identify contracts expiring in 90 days and draft task assignments for approval.

• Prepare a draft employment-contract review memorandum with verifiable Ugandan legal authorities.

• Summarise overdue compliance actions by accountable business unit.

32. Security, data governance and measurable quality gates

Control	BRD requirement / verification
Legal privilege and confidentiality	Matter-level access, ethical walls, secure external delivery and controlled retention; independent negative access tests.
Legal source governance	Maintain source inventory with jurisdiction, provider, licence, effective dates, verification method and update cadence; unresolved licences block dependent capabilities.
Conflicts screening	Screen new matters against permitted parties and relationships; human clearance mandatory before engagement.
Data model	Define Tenant, User, Client, Identity, Channel, Interaction, Enquiry, Lead, Matter, Document, Evidence, Task, Approval, LegalSource, Invoice and AIUsage entities with unique keys and relationships.
Reliability and performance	Set approved availability, latency, RPO, RTO, concurrent-user and dashboard freshness targets before go-live; do not invent contractual SLAs.
AI assurance	Test citation validity, document extraction, prompt-injection resistance, privacy leakage, jurisdiction handling and escalation on representative legal scenarios.
WhatsApp governance	Implement permitted templates, messaging consent, identity assurance and secure-link delivery for sensitive content.
Multi-tenant isolation	Run negative tests on APIs, searches, exports, AI retrieval and administrative access.
Evidence integrity	Preserve originals, timestamps, hashes, access history and export chain-of-custody metadata where required.

33. Delivery baseline, sign-off and requirement traceability

Release 1 MVP: WhatsApp and web intake, unified inbox, verified client linking, conflict checks, client/matter records, professional legal workbench, source-grounded research, document review/drafting, acquisition and operational dashboards, permission-controlled AI Command Centre, AI metering and tenant administration. Later phases: native mobile, broader Teams integrations, advanced predictive intelligence, external counsel analytics and complex financial integrations.

Gate	Approval evidence	Accountable approver
Business scope	Signed requirements, personas, operating-model boundaries and MVP exclusions	Otic product owner and pilot customer sponsor
Legal governance	Approved legal source coverage, human approval policy and	Customer legal lead / designated

	confidentiality controls	compliance authority
Data and integration	Approved data dictionary, API contracts, channel dependencies and migration mapping	Solution architect and customer IT lead
UAT	Traceable test results for every critical requirement, including negative security tests	Customer business owner and QA lead
Commercial readiness	Approved pricing schedule, usage policy, billing reconciliation and tenant controls	Otic commercial owner
Go-live	Recorded unresolved risks, recovery tests, training and signed release authorisation	Designated steering group

Status: Consolidated draft for stakeholder review. All numeric service levels, legal source licences, commercial rates and institution-specific configurations remain subject to formal approval. Detailed UI screens, API payloads and exception-state designs will be specified in the FSD and TSD.
